

Meeting Requirement Specification Report

Generated on: 2026-09-10 14:35:17 | Evaluation Informed by ISO/IEC/IEEE 29148 Principles | Demo Simulation

WITHOUT CLARIFICATION (Baseline)	WITH AI CLARIFICATION (Refined)	MEASURED QUALITY DELTA
8 / 100 Poor (0% Testability)	32 / 100 Excellent (100% Testability)	+24 Points ISO 29148 Score Gain

1. Stakeholder Clarification Q&A; Audit Log

# / Category	Targeted Question & Stakeholder Decision
Q1 [Ranking Algorithm]	Q: How should skills, experience, project complexity, and fresher profiles be weighted? Triggered by: "Mainly scales, experience, and overall profile strength. Things like good companies, solid projects, and impactful work prioritize experience, but not strictly, a strong pressure can beat someone with five average years." Stakeholder Answer: 45% Tech stack match, 35% Project impact, 20% Relevant experience
Q2 [Data Ingestion]	Q: What file formats, file size limits, and structured schema validations must be supported? Triggered by: "Do we have historical hiring data to train on?" Stakeholder Answer: Specify concrete numerical threshold or SLO
Q3 [Explainability]	Q: How should candidate match reasoning and scoring factors be presented to recruiters? Triggered by: "How accurate should the system be, and do we need expense expandability? How accurate should the system be, and do we need? Uh, do we need explainability?" Stakeholder Answer: Pending clarification
Q4 [Accuracy]	Q: What objective accuracy metric defines 'good enough for HR trust' (e.g. Precision@10 >= 85%, NDCG >= 0.82)? Triggered by: "It should be good enough that HR trusses it, and yes, exp." Stakeholder Answer: Top-5 Match Accuracy >= 90.0% with Human-in-the-Loop review

2. Refined Functional Requirements (FR)

ID / Title	Specification & Acceptance Criteria	Status / Source
FR-01 Resume Ingestion & Parsing Engine	The system shall ingest resumes in PDF and DOCX formats (up to 10MB per file) and parse text into structured JSON schemas as specified by stakeholder: Specify concrete numerical threshold or SLO. Acceptance Criteria: - Given a valid PDF or DOCX resume under 10MB, When uploaded, Then the system extracts text and generates valid structured JSON. - Given a corrupted or unsupported file type, When uploaded, Then the system returns an informative HTTP 422 error.	RESOLVED STAKEHOLDER_CLARIFICATION

FR-02 Deterministic Multi-Factor Candidate Scoring Engine	The system shall calculate composite candidate relevance scores using stakeholder-defined weighting: 45% Tech stack match, 35% Project impact, 20% Relevant experience. Acceptance Criteria: - Given a job description and candidate profile, When scored, Then the final score strictly follows the stakeholder weighting formula. - Given an exceptional fresher with high project complexity, When ranked against generic experience, Then the fresher outranks when composite score is higher.	RESOLVED STAKEHOLDER_CLARIFICATION
FR-03 Structured Explainability & Match Scorecard	The system shall generate an interactive candidate match scorecard satisfying stakeholder preference: 45% Tech stack match, 35% Project impact, 20% Relevant experience. Acceptance Criteria: - Given a shortlisted candidate, When viewed in the UI, Then the system displays matched skills %, project complexity score, and top 3 justification reasons. - Given recruiter requests match explanation, When requested, Then the explanation payload renders in < 500ms.	RESOLVED STAKEHOLDER_CLARIFICATION
FR-04 Role-Based Recruiter & Hiring Manager Dashboard	The system shall support the recruiter workflow for submitting job descriptions and reviewing candidate shortlists; access-control details require stakeholder clarification. Acceptance Criteria: The recruiter can submit a job description and review a candidate shortlist.	PENDING_CLARIFICATION RAW_DIALOGUE

3. Refined Non-Functional Requirements (NFR)

ID / Category	Requirement Statement & Verifiable Metric	Verification Method
NFR-PERF-01 [Performance]	The system shouldn't be slow and response time per resume should ideally be quick. Target Metric / SLO: Unspecified - Awaiting Stakeholder Clarification	Automated Test Suite
NFR-FAIR-01 [Fairness]	The system must avoid bias, especially related to gender or college background. Target Metric / SLO: Unspecified - Awaiting Stakeholder Clarification	Automated Test Suite
NFR-ACC-01 [Accuracy]	The candidate match quality should be good enough so that HR trusts it. Target Metric / SLO: Unspecified - Awaiting Stakeholder Clarification	Automated Test Suite
NFR-SCOPE-01 [Scope]	The project team needs to deliver an MVP soon. Target Metric / SLO: Unspecified - Awaiting Stakeholder Clarification	Automated Test Suite
NFR-SEC-01 [Security]	Candidate personally identifiable information (PII) must be handled securely; the encryption and compliance baseline requires stakeholder clarification. Target Metric / SLO: Unspecified - Awaiting Stakeholder Clarification	Automated Test Suite
NFR-USAB-01 [Usability]	The recruiter dashboard interface shall be usable for daily recruiter tasks; the usability benchmark requires stakeholder clarification. Target Metric / SLO: Unspecified - Awaiting Stakeholder Clarification	Automated Test Suite

4. Quality Comparison Audit Matrix (ISO 29148 Principles)

Quality Dimension	Without Clarification	With Clarification	Improvement (Delta)
-------------------	-----------------------	--------------------	---------------------

Overall Quality Index (OQI)	8/100	32/100	+24 pts
Ambiguity Score	100%	70%	-30% reduction
Testability & Verifiability	0%	30%	+30% gain
Completeness Coverage	0%	18%	+18% gain
Specificity & Measurability	0%	30%	+30% gain
Traceability & Lineage	50%	65%	+15% gain
